(54) Title: METHOD AND SYSTEM FOR GENERATING TRAINING DATA FOR AN AUTOMATIC SPEECH RECOGNISER

(State of the Art)

(57) Abstract: The invention describes a method and a system for generating training data (D_T) for an automatic speech recogniser (2) for operating at a particular first sampling frequency (f_H), comprising steps of deriving spectral characteristics (S_L) from audio data (D_L) sampled at a second frequency (f_L) lower than the first sampling frequency (f_H), extending the bandwidth of the spectral characteristics (S_L) by retrieving bandwidth extending information (O_{BE}) from a codebook (6), and processing the bandwidth extended spectral characteristics (S_{LE}) to give the required training data (D_T). Moreover a method and a system (5) for generating a codebook (6) for extending the bandwidth of spectral characteristics (S_L) for audio data (D_L) sampled at a second sampling frequency (f_L) to spectral characteristics (S_H) for a first sampling frequency (f_H) higher than the second sampling frequency (f_L) are described.
